

SUSTAINABILITY (KPI)

PURPOSE: - To provide a measure of the contractor's contribution to Lambeth Living and Lambeth Council's sustainability agenda. To show the percentage of waste produced on site during the project that is not sent to landfill.

METHOD: - This method provides a measure of the volume of waste produced in metric tonnes, which is re-used/recycled, as a proportion of the total volume of waste produced during the construction process of the project.

From the start on site stage of project until practical completion, the contractor will keep a record of all waste removed from site and how it is disposed of.

Each month, using security or other gate records, sub-contractors notes or waste transfer notes the contractor will complete a form and email a copy to the project manager or the consultant providing a summary account of the waste type and its final destination, showing the percentage of waste in tonnes that was sent to landfill.
