

Windows

Note: If the attached AMP shows a cost for replacement, the block has been inspected and it is in our opinion that the condition of the windows warrants renewal. If you do not agree with this judgement, please make contact with the representatives from the consultants who can provide a copy of the condition survey/ feasibility undertaken for further discussion.

If you have replaced your own windows in double glazed PVCu or another material, these will be inspected once onsite and two elements will be checked.

1. Building Control – Are the windows compliant with current building regulations, allowing for the relevant egress where required.
2. Planning Approval – Do the windows have planning permission or comply with the planning permission submitted and approved for the block by the consultants.

If you would like to check whether your windows are compliant with the current planning approval, please visit the 'Lambeth Planning database' available online. If the planning application is not on the database, this is still being processed.
